🎛️ KEYS • CODES • MODES

TEMPLATE UI v3 – GEOMETRIC CLOCK SYSTEM

🖥️ 1. TEMPLATE BROWSER (LEFT PANEL – FINAL)

You were right to expand it. Here is the clean, complete structure:

📚 CATEGORIES

- 🎵 Notes
- 📏 Intervals
- 🎹 Chords
- 🔁 Progressions
- 🎼 Scales
- 🧠 Concepts
- 🎛️ Voicings
- 🔄 Inversions
- 🧪 CYMATIC LAB
- 🎥 Recordings

⚠️ IMPORTANT DESIGN RULE

Show only one category expanded at a time

Prevents overload.

🟡 2. CORE INTERFACE – "CENTER TRUTH CLOCK"

This is your main instrument.

🎯 CORE IDEA

Everything starts from ONE ACTION

🟢 STEP 1 (ENTRY POINT)

User clicks ONE note on the clock:

👉 That becomes:

- Root
- Key center
- System initializes automatically

🔥 RESULT (AUTO-GENERATION)

Immediately:

- Scale appears (default: major)
- Basic triads appear (1-3-5)
- Full system lights up across all views

👉 No setup required

🔄 3. CLOCK INTERACTION (SPIN + CLICK)

🎛 CLOCK BEHAVIOR

- 12 positions (chromatic)
- Rotatable dial
- Click = select note
- Drag = rotate harmonic context

🎯 USER ACTIONS

1. CLICK

Select root note

2. ADD SECOND NOTE

Creates interval

3. ADD THIRD NOTE

Creates triad

4. ADD FOURTH NOTE

Creates extended chord

🧠 4. GEOMETRIC VISUAL SYSTEM (YOUR BIG IDEA – STRUCTURED)

We make this precise:

🎵 NOTE → POINT

Single note:

- one point on circle

📏 INTERVAL → LINE

2 notes:

- line between them
- angle = interval

🔺 TRIAD → TRIANGLE

3 notes:

- triangle shape
- shape changes:
  - major
  - minor
  - diminished

🟦 4 NOTES → SQUARE / SHAPE

- 7th chords
- dominant / major / minor variations

🔷 5+ NOTES → POLYGONS

- pentagon → pentatonic

- hexagon → hexatonic
- etc.

🔥 DESIGN INSPIRATION

You mentioned Greek solids–use this carefully:

Keep it 2D first (circle geometry)
Don't jump to 3D too early

⚠️ IMPORTANT CORRECTION

Do NOT literally map:

- 3 notes = always triangle (good)
- 4 notes = always square (NOT always musically accurate)

👉 Geometry = visual metaphor, not rigid rule

🎛️ 5. "ONE BUTTON MAGIC" (CRITICAL FEATURE)

🎯 USER PRESSES:

"Choose Note"

SYSTEM DOES:

1. Sets root
2. Loads default scale (major)
3. Generates triads
4. Creates progression (basic I-IV-V or similar)
5. Starts playback

RESULT:

🎧 Instant "AI song"

⚡ THIS IS HUGE

You now have:

ZERO-LEARNING-CURVE ENTRY

🔄 6. LAYER DEPTH (HIDDEN POWER)

After simple entry, user can expand:

LEVEL 1 (DEFAULT)

- Root
- Scale
- Basic chords

LEVEL 2

- Add intervals
- Modify chords

LEVEL 3

- Full progression control
- Voicings / inversions

LEVEL 4 (ADVANCED)

- CYMATIC LAB
- Template editing
- Harmonic modeling

🎮 7. DRAG + DROP INTERACTION

USER CAN:

- Drag shapes (triangles, lines, etc.)
- Drop onto clock
- System converts to intents

EXAMPLE:

Drag triangle → drop on C

👉 System:

- creates triad
- maps to key
- updates all views

🧠 8. HOW THIS CONNECTS TO YOUR ENGINE

USER ACTION:

Click / drag / add note

SYSTEM:

Interaction → Intent → Layer Stack Engine → Note Graph → All Views

🎨 9. VISUAL SYNCHRONIZATION

Everything reflects instantly:

- 🎸 Fretboard
- 🎹 Keyboard
- 🎼 Staff
- 🎵 TAB
- 🟡 Clock

🔥 10. WHY THIS DESIGN WORKS

FOR BEGINNERS:

- One click = music
- visual understanding instantly

FOR INTERMEDIATE:

- build chords visually
- explore relationships

FOR ADVANCED:

- full harmonic control
- template + lab system

⚠️ 11. CRITICAL DESIGN WARNING

You are VERY close to overbuilding.

DO NOT:

❌ show all shapes at once
❌ overload with geometry
❌ expose all layers immediately

ALWAYS:

✅ start simple
✅ reveal depth progressively
✅ keep center clean

🎯 FINAL SIMPLIFIED EXPERIENCE

Click one note → hear music
Add a note → see interval
Add a note → build chord
Drag shape → create structure

🚀 WHAT YOU NOW HAVE

This is no longer just:

- a UI
- a music tool

It is:

🎛️ A geometric music interaction system

👉 NEXT STEP (HIGHLY RECOMMENDED)

Now we should define:

🎮 “Exact Interaction Mapping”

- every click → which intent
- every drag → which intent
- every shape → which musical rule

or

💻 “Build MVP UI Spec”

- exact screens
- exact components
- what to build FIRST

Just say:

“Interaction mapping”
or
“MVP UI spec”

and we lock the next step.
